

## Telephone Hood 500

Telephone Hood 500 is a perfect solution for rooms or halls where telephone conversations are disturbed by many background noises. This is true especially for workshops or production plants with loud machine and production noises.

Telephone Hood 500 is only suited for wall-mounted telephones.

The construction of the back wall is made sound-absorbent and has a perforated inner front made of aluminium. The place of deposit is made of synthetic material. The hood made of slightly coloured acrylic glass is hard to be inflamed.

The telephone hood has to be fixed at the wall with wooden screws and wall dowels.

weight: 9 kg net, 17 kg gross

muffling of noises: approx. 4 dB
